

Parking Guidance System Management Software

Product Features

- Real time monitoring
 - * Vacant parking
 - * Occupancy rate
 - * Entry and exit timing
- Graphical Map
- Third party integration
- Support of LED display and camera configuration
- Users authentication rights

User Interface

Parking Monitor displays the full map of parking structure including the occupancy and availability of these spaces. Overtime parking feature is optionally available to determine any excess of time in the parking.

Data Inquiry grants detailed information on each parking slot. Designed to identify information of the rate used by floor and zone, daytime parking statics, overtime alarm, and parking information. Generates reports for further detailed statistics in charts and graphics.

Error display notifies the user of any failures occurring on the system. Rapid identification of malfunctions offers real time diagnosis and efficiency of the system.
